EDUCATION

2023 - 2026 BSc Computer Science at **University College London** (First Class 1:1)
2021 - 2023 **IB Diploma Program** at JESS, Dubai (42 Points)

EMPLOYMENT

Software Engineering Intern, HubSpot Jul 2025 – Sep 2025
– Resolved 30+ front-end tickets in a high-traffic React codebase, improving clarity and reliability.
– Contributed to a new automated user-sync feature, increasing contact sync completion rates by 25%.
– Collaborated cross-functionally with product, design, and QA to ensure zero-regression releases.

Teaching Assistant & Student Ambassador, UCL Mar 2024 – Jun 2026
– Guided 30+ first-year students in C and Java programming labs; provided technical mentorship.
– Supported 400+ prospective students; participated in Q&As about curriculum and student life.

Cybersecurity Intern, Barikat Cyber Security Jul 2024 – Aug 2024
– Contributed to an elite pentesting team conducting 15+ comprehensive vulnerability assessments.
– Assisted in identifying and remediating critical security flaws in enterprise client systems.

Market Research Intern, Twentify Consumer Research Aug 2021 – Sep 2021
– Supported multi-phase market research projects and enhanced internal tools to streamline data flows.

CLIENTS AND PROJECTS

Quantihack Hackathon – 2nd Place (£5k Prize) [GitHub](#)
‘Entelechy’ Commodity Trading Model
– Engineered a data pipeline using satellite imagery to predict global crop yields ahead of public reporting.
– Developed and backtested a commodity trading algorithm, achieving 70% returns over an 8-year historical period against a declining baseline market.
– Built a scalable data dashboard to aggregate real-time streams and expand predictive modeling to additional agricultural regions and commodities.

IBM [GitHub](#)
ExMotu AI-Enhanced Racing Simulator
– Processed real-time OBD2 telemetry data from race cars to generate synchronized visual replays.
– Employed IBM AI models to analyze driving lines and performance metrics.

Intel and National Autistic Society [Website](#)
‘Reading Star’ AI Karaoke App
– Developed a literacy application using React and REST APIs to deliver interactive content.
– Optimized AI model inference on Intel NPUs to ensure low-latency, offline functionality.

Project [GitHub](#)
Full Stack Personal Blog ‘Maple’
– Built a blogging platform with Java and Spring Boot following strict Object-Oriented Programming.
– Implemented secure user authentication via OAuth2.

AI Marmoom Initiative Equine Therapy [GitHub](#)
Interactive Training Program
– Created a web-based educational game using JavaScript to support training children with special needs.

Local Bakery [GitHub](#)
Stock Management System
– Developed a Python and SQL desktop application to automate inventory tracking and reduce waste.
